CYBERLOCK.COM

541.738.5500 | SALES@CYBERLOCK.COM

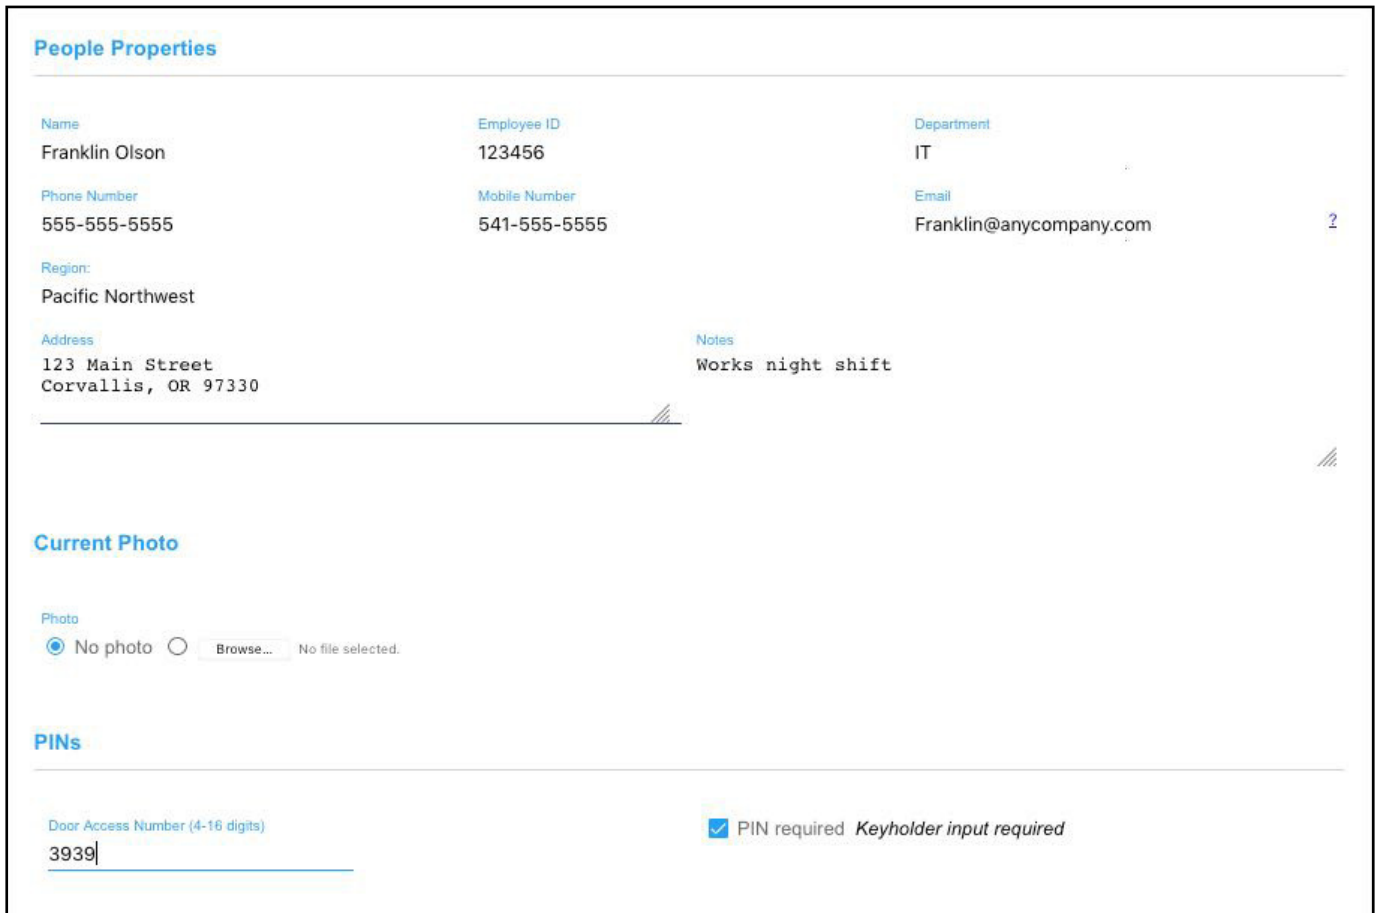

CyberAudit-Web 9.0 includes a host of new features, improves performance, and offers an intuitive, streamlined view of your CyberLock system. The new and improved, user-friendly interface includes a home page that conveniently summarizes the overall health of the system. The CAW 9.0 home page helps keep your CyberLock system operating at peak performance by automatically emphasizing components that require urgent attention, such as unprogrammed locks and expired keys.

The home page serves as a command center for your entire system, providing a dynamic visual overview of all your system components, including communicators, CyberKey smart keys, CyberLock cylinders, FlashLock products and more. With up to 60 hyperlink shortcuts, the new home page delivers immediate access to system and component settings, dramatically simplifying the management process for both small and large scale CyberLock installations.

CyberAudit-Web 9.0 was designed from start to finish with the user experience in mind, featuring modernized graphics and a redesigned interface that focuses on convenience, efficiency, and usability. Additionally, CAW 9.0 adds support for CyberLock's most innovative key to date, the CyberKey Flash, as well as the full range of CyberLock's new ValdiKey vaults and FlashLock products.

A few of the new features include:

- Updated theme

The screenshot displays the 'People Properties' section for an employee named Franklin Olson. The interface is clean and modern, with a light blue header and a white background. The data is organized into a grid-like structure with labels and values. A 'Notes' section is also present, and a 'Current Photo' section at the bottom shows a 'No photo' status with a 'Browse...' button. The 'PINs' section at the very bottom shows a door access number and a checked box for 'PIN required'.

Name	Employee ID	Department
Franklin Olson	123456	IT
