

# CyberAudit-Web Basic Management Software

CyberAudit Basic is an excellent choice for small- or medium-sized companies that need to increase key control and accountability throughout their organization. Basic offers the basics of access control—scheduled access, auditing, and reporting—plus offers many advanced features such as email notification of events, key expirations, blocking a lost key, and multiple key and delayed access.

Basic is designed for installations of approximately 500 locks and 500 keys. Basic can come preloaded on a CyberAudit [SE-100 server](#) or can be installed on a computer or server. In addition to the Basic software, a complete system includes CyberLock [electronic cylinders](#), CyberKey [programmable smart keys](#), and one or more [communication devices](#).

## Software Features

- Manage as many as 500 locks and 500 keys
- Download detailed audit trails of lock and key activity
- Set key access schedules (i.e. M-F 8:00 a.m. – 5:00 p.m.)
- Expire and/or deactivate keys
- Manage lost keys
- Program locks with a multiple key mode (requires more than one key to open a lock)
- Program locks with a delay mode (a period of time before the lock actually opens after a key has been presented)
- Configure automatic email notifications on access activity (i.e. low battery, key expiration, notification of events)
- Grouping capabilities for locks and people
- Access through a LAN or securely over the Internet
